Result Information

Grammar Quality
(Except Similarity & AI Content) **67.68 %**

1. Phrases Quality	66.63 %	
2. Non-Duplicate Content	90.01 %	(Duplicate 9.98 %)
3. Indexed Content	25.39 %	
4. Grammar Info.	88.69 %	(Mistakes 31, Suggestion 52)

Detailed Analysis

1. Phrases Quality

Only Alphabets	Only Numbers	Alpha-numeric	Words with Special Chars.,
71.78 %	02.54 %	00.35 %	25.31 %

Unique Words 39.67 %

Counts the number of terms that are used just once in your document.

Rare Words 53.10 %

Words that are not part of the 5,000 most common words in the English language.

Common Words 35.39 %

Words that are part of the 1,000 most common words in the English language.

Word Length 06.49

Measures average word length (Characters per word).

Sentence Length 20.10

Measures average sentence length (words per sentence).

2. Non-Duplicate Content

Duplicate Sentences

Sentence No.	Characters	Words	Repetition	% in Report

Line 11| [Department of Information Science and Engineering](#)
Line 12| Acharya Institute [of Technology, Bengaluru, India](#)
Line 13| someshwarr.22.beis#acharya.ac.in Abstract- Artificial intelligence and [machine learning](#) are
Line 14| widely applied in the life sciences. However, using machine
Line 15| learning to analyze complex data and train models is
Line 16| challenging because many researchers lack the domain-
Line 17| specific knowledge needed to operate these ML tools. An
Line 18| AI-powered platform that can perform the entire process
Line 19| from preprocessing to model export would be extremely
Line 20| valuable to the life science community. With easy access to
Line 21| various ML models, the platform would help researchers
Line 22| analyze complex datasets more easily. Nowadays, most
Line 23| AI/ML libraries require advanced programming, machine
Line 24| learning, data preprocessing, and visualization skills. So, in
Line 25| this research, we propose a web-based, AI-enabled
Line 26| platform that is capable of preprocessing, training,
Line 27| evaluating, visualizing, and exporting trained models
Line 28| without any coding expertise. By integrating machine
Line 29| learning and deep neural network models, our platform
Line 30| assists in recognizing, classifying, clustering, and predicting
Line 31| a [wide range](#) of multi-modal and multi-sensor datasets,
Line 32| including images, language, and numerical data, [for drug](#)
Line 33| [discovery, protein](#) sequence classification, and medical
Line 34| diagnostics. Index Terms - Machine learning, Bioinformatics, Neural
Line 35| networks. I. INTRODUCTION
Line 36| In the last 10 years, life sciences have become one of the
Line 37| largest producers of raw data in world. Genome sequencing,
Line 38| protein studies, and medical imaging all generate huge datasets

Line 39| every day. These datasets hold valuable insights, but their size.
Line 40| and complexity make them very difficult to handle with traditi
Line 41| -onal analysis methods available.
Line 42| Machine learning (ML) has shown a great promise in
Line 43| solving this challenge. It can identify patterns in high-
Line 44| dimensional data, make predictions, and support tasks
Line 45| like disease detection or protein classifications.
Line 46| Researchers have successfully used ML [for drug discovery](#),
Line 47| [protein](#) analysis, make predictions for advance research and
Line 48| many other applications Even with the success, many biologists
Line 49| and healthcare professionals are unable to use ML directly
Line 50| because of lack of knowledge in using these models. Most ML
Line 51| tools require good programming knowledge, strong math skills,
Line 52| and experience in data science. For researchers without this
Line 53| background, applying ML becomes very tough.
Line 54| To reduce this gap, we have proposed BioMLStudio, a no
Line 55| code, web-based platform for automated [machine learning](#) in
Line 56| bioinformatics. The system is designed so that a researcher can
Line 57| upload a dataset, choose or let the system recommend a model,
Line 58| easy to handle, run training, check results, visualize results, and
Line 59| finally download a trained model - all through a simple
Line 60| interface. By combining traditional ML methods with deep
Line 61| learning architectures, [BioMLStudio](#) will support multiple
Line 62| types of biological data such as text, images, and sequences.
Line 63| The main goal of this platform is to make ML more
Line 64| accessible to life science researchers by hiding the technical
Line 65| complexity of using these ML models and to train them,
Line 66| [BioMLStudio](#) allows users to focus on their research problems
Line 67| while still benefiting from advanced AI tools.

Line 68| [. II. PROBLEM STATEMENT](#)

Line 69| Biomedical researchers now generate vest heterogeneous
Line 70| data sets (sequencing reads, mass spec profiles, clinical test,
Line 71| pathology images and other multimodal measurements).
Line 72| However, applying a modern [machine learning](#) to [these data is](#)
Line 73| [still](#) obstructed by the requiring barriers. (1) Technical access-
Line 74| many life science researchers lack programming skills and they
Line 75| face of very steep learning curve to use the Machine Learning
Line 76| libraries and ML pipeline. (2) Integration and Reproducibility-
Line 77| preprocessing, model selection, hyperparameter tuning and
Line 78| visualization are imploded across tools, making [end to end](#)
Line 79| experiments hard to reproduce and compare for non-
Line 80| programmers. (3) Domain's suitability and interpretability-
Line 81| sole purpose machinery learning often fails to capture the
Line 82| domain constants like class in balance, batch effect, multimodal
Line 83| alignment and do not provide any kind of explanation that
Line 84| clinicians and biologists require to trust the model outputs.
Line 85| Biomedical researchers now days generate very large and
Line 86| varied datasets are containing sequencing reads, clinical tests,
Line 87| pathology images and many other measurements and readings.
Line 88| But using modern [machine learning](#) on [these data is still](#) hard
Line 89| for many of the researchers. There are a few main problems.
Line 90| First, technical access. Many life-science researchers do not
Line 91| have strong programming skills. Learning to use ML libraries,
Line 92| manage software environments, and build a full ML pipeline
Line 93| takes a long time. This keeps many biologists and clinician's
Line 94| dependent on specialist programmers or slows their work while

Line 95| they learn.

Line 96| Second, integration and reproducibility. Steps like cleaning
Line 97| data, choosing features, tuning models, validating results, and
Line 98| making plots are often done in different tools or scripts. That
Line 99| makes experiments hard to repeat or compare, especially for
Line 100| people who are not programmers. Work moves between
Line 101| notebooks, command lines, and cloud services with little record
Line 102| of exactly what was done.

Line 103| Third, domain suitability and interpretability. Off-the-shelf
Line 104| ML tools often do not handle biology-specific issues such as
Line 105| strong class imbalance, batch effects, missing values that
Line 106| matter, or combining different types of data. They also tend to
Line 107| act like “black boxes” and do not give explanations that
Line 108| clinicians or biologists can trust. Without clear, interpretable
Line 109| reasons for predictions, people are reluctant to use the results in
Line 110| experiments or practice.

Line 111| There are also practical gaps in scaling and governance.
Line 112| Models built in one place are hard to package, version, and
Line 113| share. Many projects lack proper provenance (who changed
Line 114| what and when), model versioning, or exportable audit logs.
Line 115| This makes collaboration, reuse, and any move toward clinical
Line 116| or production use difficult.

Line 117| In short, the combination of hard technical entry barriers,
Line 118| fragmented toolchains, domain-specific data challenges, and
Line 119| poor interpretability limits the impact of ML in biology.

Line 120| [BioMLStudio](#) brings these pieces together in one simple
Line 121| graphical interface so more researchers can run reliable and
Line 122| explainable, and reproducible ML experiments without
Line 123| learning advanced programming first.

Line 124| III. LITERATURE SURVEY

Line 125| Various technological areas such as artificial intelligence,
Line 126| machine learning, bioinformatics, and cloud computing have
Line 127| driven the rapid progress of intelligent biomedical analysis
Line 128| systems with particular focus on data preprocessing, feature
Line 129| extraction, and model training.

Line 180 | [deploy ML models without any need of coding knowledge.](#)
Line 181 | [These pipelines automate data preprocessing, data cleaning,](#)
Line 182 | [model selection, training steps, and evaluation.](#) This work
Line 183 | [demonstrates the importance of accessibility for domain experts,](#)
Line 184 | [particularly biologists and clinicians, who do not have any](#)
Line 185 | [advanced computational skills.](#) Similar efforts in AutoML—
Line 186 | [such as Auto-WEKA \[5\], auto-sklearn \[6\], and Google AutoML](#)
Line 187 | [\[7\]—demonstrate the potential of automation to streamline the](#)
Line 188 | [ML lifecycle.](#)
Line 189 | [However, this pipeline has two major limitations: it provides](#)
Line 190 | [only limited integration of deep learning methods and lacks](#)
Line 191 | [various visualisation features that require advanced fusion](#)
Line 192 | [approaches \[12\]. Moreover, various multi-model datasets such](#)
Line 193 | [as biomedical images, genetic sequences, and clinical data are](#)
Line 194 | [restricted as they require advanced technology.](#) These
Line 195 | [limitations highlight the need for platforms like BioML Studio,](#)
Line 196 | [which aim to combine no-code usability with advanced ML](#)
Line 197 | [capabilities and features.](#)
Line 198 | D. Deep Learning for Genomic Sequence Classification
Line 199 | The use of [deep learning](#) techniques for classification of
Line 200 | genomic sequences [4]. [CNNs](#) can be used to detect short
Line 201 | sequence motifs, while [RNNs](#) and [LSTMs](#) capture long-range
Line 202 | dependencies [13], [14]. Alipanahi et al. [13] illustrated the
Line 203 | application of [deep learning](#) to predict DNA and RNA binding
Line 204 | protein sites from primary sequence data. Zhou and
Line 205 | Troyanskaya [14] demonstrated the modeling of non-coding
Line 206 | variants using deep architectures.

Line 207 While not all of these models come close to the performance
Line 208 of the classical statistical methods [11], there are problems to
Line 209 be solved. There require high training costs [18], the
Line 210 approaches lack transparency [16], [17], and there is a lack of
Line 211 confidence in the ability to work with independent datasets
Line 212 [19]. Tools such as those in BioMLStudio, can address these
Line 213 issues by offering scalable infrastructure, deep data-driven
Line 214 models with transparent visualizations, and explainability
Line 215 resources tailored for life scientists.

Line 216 IV. PROPOSED METHODOLOGY

Line 217 A. System Architecture

Line 218 Fig. 1. [BioMLStudio](#) System Architecture

Line 219 Fig.1 shows the system architecture of [BioMLStudio](#) is
Line 220 divided into three main layers: Front End, Back End, and
Line 221 Interface. Together, they enable an end-to-end no-code AI
Line 222 pipeline for bioinformatics research, from [data collection](#) to
Line 223 prediction and explainability.

Line 224 B. Frontend Module

Line 225 The frontend provides a guided workflow for dataset
Line 226 selection like (tabular, image or files), input or target feature
Line 227 selection, light validation, and users can leave default
Line 228 preprocessing and modeling choices for quick runs. The
Line 229 platform also supports downloading final reports (PDF) and
Line 230 trained model. This simple, task-oriented user interface keeps
Line 231 the learning curve low while still permitting advanced
Line 232 configuration when required.

Line 233 C. Backend Module

Line 234 The backend contains four principal object classes that
Line 235 coordinate all computational work: [DataHandler](#),
Line 236 [ModelEngine](#), [NeuralEngine](#), and [VisualEngine](#). The high-
Line 237 level flow is: raw data → [DataHandler](#) (pre-preprocessing +
Line 238 preprocessing) → [ModelEngine](#) selects model(s) →
Line 239 [NeuralEngine](#) executes training/evaluation/tuning →
Line 240 [VisualEngine](#) compiles logs, plots, and reports. Each class is
Line 241 modular so new algorithms and transformers can be plugged in
Line 242 with minimal changes.

Line 243 [Data: Tabular, Image, Language, or Multimodal](#)

Line 244 [\(DNA/Protein Sequences, Clinical Records, Biomedical](#)

Line 245 [Images\) Result: Trained models, metrics, logs, and visual outputs](#)

Line 572 Export report in PDF/HTML format for end-user
Line 573 Save results and trained model artifacts to storage
Line 574 Observation: **BioMLStudio** consistently outperformed standard ML
Line 575 pipelines by automating preprocessing, feature selection, and
Line 576 hyperparameter optimization. Compared to expert-tuned
Line 577 models, it achieved slightly higher or comparable accuracy
Line 578 end function
Line 579 Algorithm 4: [VisualEngine – Logging and Visualization](#)
Line 580 VII. EXPERIMENTAL RESULTS AND PERFORMANCE
Line 581 ANALYSIS 1. Experimental Setting
Line 582 To evaluate the effectiveness of BioMLStudio, we carried out
Line 583 experiments on bioinformatics tasks involving DNA sequence
Line 584 classification, protein structure prediction, and medical image
Line 585 analysis. Datasets were collected from publicly available
Line 586 biomedical repositories (e.g., UCI heart disease dataset, [UniProt](#)
Line 587 protein sequences, and chest X-ray dataset).
Line 588 Datasets Used:
Line 589 DNA sequences: 10,000 labeled sequences for promoter
Line 590 prediction. Protein classification: 5,000 protein sequences for family
Line 591 classification. Medical imaging: 2,500 chest X-ray images for anomaly
Line 592 detection. Global Model: Deep neural networks (CNNs for imaging, Bi-
Line 593 LSTMs/Transformers for sequences) combined with classical
Line 594 ML baselines (Random Forest, SVM) for benchmarking.
Line 595 Training Environment: Models were trained in the backend
Line 596 using GPU acceleration (NVIDIA RTX series) with automated
Line 597 hyperparameter tuning (AutoML).
Line 598 Evaluation Metrics:

Line 599| 1. Accuracy (ACC): Correct predictions / Total predictions.
Line 600| 2. Precision, Recall, F1-score: For classification reliability.
Line 601| 3. Training Time & Efficiency: Average runtime per model
Line 602| training. 4. Resource Utilization: CPU/GPU memory usage during
Line 603| training. 5. Explainability Score: Percentage of samples with
Line 604| interpretable SHAP/LIME explanations.

Line 605| 2. Model Performance

Line 606| Task [BioMLStudio](#) (AutoML)

Line 607| Standard ML

Line 608| Pipeline DNA Sequence

Line 609| (ACC) 94.8% 88.2%

Line 610| Protein Classification 92.5% 86.0%

Line 611| Medical Imaging

Line 612| (X-ray) 93.7% 85.5%

Line 613| while requiring no coding or manual intervention. The
Line 614| explainability module further enhanced model trust by
Line 615| providing interpretable outputs for more than 90% of
Line 616| predictions. 3. Evaluating Robustness and Reliability

Line 617| Unlike traditional ML pipelines where preprocessing
Line 618| inconsistencies or feature engineering errors can degrade
Line 619| results, [BioMLStudio](#) enforces standardized preprocessing and
Line 620| AutoML-based selection, reducing user errors. To test
Line 621| robustness, noisy or imbalanced datasets were introduced.
Line 622| For imbalanced DNA sequences, [BioMLStudio](#) applied
Line 623| automatic oversampling, maintaining an accuracy of 91.3%,
Line 624| compared to only 83.5% for a naive pipeline.
Line 625| For noisy protein datasets, dimensionality reduction
Line 626| (PCA/Autoencoder) reduced overfitting, achieving 90.2%
Line 627| accuracy, while the baseline dropped to 80.6%.
Line 628| These results show BioMLStudio's resilience to imperfect
Line 629| real-world biomedical data.

Line 630| 4. Communication and Efficiency

Line 631| Since [BioMLStudio](#) operates as a cloud-based no-code
Line 632| system, efficiency was measured in terms of computation and
Line 633| user interaction overhead:

Line 634| Automated Pipelines: Reduced average model training setup
Line 635| time from 2–3 hours (manual) to less than 10 minutes.
Line 636| Resource Optimization: GPU-based training reduced
Line 637| runtime by ~30% compared to CPU-only execution.
Line 638| Communication Overhead: Minimal, since only processed
Line 639| results and trained artifacts are transferred between backend
Line 640| and frontend.

Line 641| This efficiency makes [BioMLStudio](#) scalable to large-scale
Line 642| datasets without burdening researchers with technical
Line 643| complexities. 5. System Overhead and Explainability

Line 644| [BioMLStudio](#) includes visualization and explainability
Line 645| layers, which introduce additional computation. However,
Line 646| overhead was minimal:

Line 647| Storage Overhead: Model artifacts and logs averaged 5–10
Line 648| MB per experiment, negligible compared to dataset sizes.
Line 649| Latency Impact: Explainability methods (SHAP/LIME)
Line 650| added ~8–12% computation time per model but provided
Line 651| interpretable outputs for the majority of predictions.
Line 652| User Experience: Reports were generated in under 30
Line 653| seconds, including visualizations, evaluation metrics, and
Line 654| explainability graphs.

Line 655 [BioMLStudio](#) provides [high accuracy, robustness to noise,](#)
Line 656 efficiency in execution, and explainable results with minimal
Line 657 overhead. It proves that end-to-end no-code ML for
Line 658 bioinformatics is both practical and scalable, making advanced
Line 659 AI techniques accessible to researchers without programming
Line 660 expertise. CONCLUSION In this work, we introduced BioMLStudio, an end-to-end no-
Line 661 [code machine learning platform](#) designed specifically for
Line 662 bioinformatics research and healthcare applications. The system
Line 663 architecture integrates data preprocessing, model selection,
Line 664 automated training, visualization, and explainable AI, allowing
Line 665 researchers to focus on domain problems rather than technical
Line 666 implementation. Through its modular backend comprising the
Line 667 [DataHandler, ModelEngine, NeuralEngine, and VisualEngine](#)
Line 668 [BioMLStudio](#) provides a flexible and scalable workflow that
Line 669 supports heterogeneous data types such as DNA sequences,
Line 670 protein structures, and medical images.

Line 671 Experimental results demonstrate that [BioMLStudio](#) achieves
Line 672 [high accuracy, robustness to noise,](#) and efficiency when
Line 673 compared to traditional manual ML pipelines. The automated
Line 674 preprocessing and [AutoML](#) engine eliminate human error and
Line 675 reduce setup time, while explainable AI modules ensure that
Line 676 predictions remain transparent and trustworthy. Despite adding
Line 677 features like visualization and interpretability, the system
Line 678 maintains minimal overhead, making it suitable for large-scale
Line 679 bioinformatics datasets.

Line 680 Overall, [BioMLStudio](#) highlights the potential of no-code AI
Line 681 platforms in bridging the gap between complex machine
Line 682 learning techniques and biomedical research needs. By lowering
Line 683 technical barriers, it empowers life science researchers,
Line 684 clinicians, and students to adopt advanced AI methods for tasks
Line 685 such as disease prediction, protein classification, and genomic
Line 686 analysis. Future extensions will focus on expanding multimodal
Line 687 integration, incorporating federated learning for privacy-
Line 688 preserving biomedical collaboration, and providing real-time
Line 689 deployment capabilities.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 120

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[BioMLStudio](#)' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[machine learning](#)', at the line number 156

Category: **Compound Words**

Suggestion: Based on the context of the sentence, we recommend you to replace '[machine learning](#)' to '[machine-learning](#)'.

Example: [view](#)

Part of the sentence to be reviewed: '[deep learning](#)', at the line number 199

Category: **Compound Words**

Suggestion: Based on the context of the sentence, we recommend you to replace 'deep learning' to 'deep-learning'.

Example: [view](#)

Part of the sentence to be reviewed: '[CNNs](#)', at the line number 200

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'CNNs' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[RNNs](#)', at the line number 201

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'RNNs' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[LSTMs](#)', at the line number 201

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'LSTMs' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[deep learning](#)', at the line number 203

Category: **Compound Words**

Suggestion: Based on the context of the sentence, we recommend you to replace 'deep learning' to 'deep-learning'.

Example: [view](#)

Part of the sentence to be reviewed: '[Fig.](#)', at the line number 218

Category: **Short Form Expression**

Suggestion: Based on the context of the sentence, we recommend you to replace 'Fig' to 'Figure'.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 218

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'BioMLStudio' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[Fig.1](#)', at the line number 219

Category: **Short Form Expression**

Suggestion: Based on the context of the sentence, we recommend you to replace 'Fig.1' to 'Figure'.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 219

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'BioMLStudio' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[data collection](#)', at the line number 222

Category: **Compound Words**

Suggestion: Based on the context of the sentence, we recommend you to replace 'data collection' to 'data-collection'.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 369

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'BioMLStudio' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[DataHandler.DataPrePreProcessing\(D_raw\)'](#) at the line number 487

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '[DataHandler.DataPrePreProcessing\(D_raw\)'](#) to 'Proper Fullstop/Period'.

Example: [view](#)

Part of the sentence to be reviewed: '[/*'](#) at the line number 488

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '[/*'](#) to 'Proper Slash Mark'.

Example: [view](#)

Part of the sentence to be reviewed: '[*/'](#) at the line number 488

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '[*/'](#) to 'Proper Slash Mark'.

Example: [view](#)

Part of the sentence to be reviewed: '[TaskType'](#) at the line number 490

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[TaskType'](#) to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[/*'](#) at the line number 493

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '[/*'](#) to 'Proper Slash Mark'.

Example: [view](#)

Part of the sentence to be reviewed: '[/*'](#) at the line number 497

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '[/*'](#) to 'Proper Slash Mark'.

Example: [view](#)

Part of the sentence to be reviewed: '[/*'](#) at the line number 498

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '[/*'](#) to 'Proper Slash Mark'.

Example: [view](#)

Part of the sentence to be reviewed: '[*/'](#) at the line number 498

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '[*/'](#) to 'Proper Slash Mark'.

Example: [view](#)

Part of the sentence to be reviewed: '[/*'](#) at the line number 503

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '[/*'](#) to 'Proper Slash Mark'.

Example: [view](#)

Part of the sentence to be reviewed: '[*/'](#) at the line number 503

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '*' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: '[tokenized](#)', at the line number 505

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'tokenized' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[DataHandler.DataPreProcessing\(D_clean\)](#):', at the line number 508

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '[DataHandler.DataPreProcessing\(D_clean\)](#):' to 'Proper Fullstop/Period'.

Example: [view](#)

Part of the sentence to be reviewed: '[/*](#)', at the line number 509

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '*' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: '[/*](#)', at the line number 509

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '*' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: '[StandardScaler](#)', at the line number 510

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'StandardScaler' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[/*](#)', at the line number 512

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '*' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: '[/*](#)', at the line number 512

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '*' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: '[\(k-](#)', at the line number 515

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '(k-' to 'Proper Hyphens Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: '[/*](#)', at the line number 517

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '*' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['*/'](#), at the line number 517

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['*/'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['oversampling'](#), at the line number 519

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace ['oversampling'](#) to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 521

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['*/'](#), at the line number 521

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['*/'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['TaskType'](#), at the line number 532

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace ['TaskType'](#) to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 534

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['*/'](#), at the line number 534

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['*/'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 537

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 540

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['*/'](#), at the line number 540

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['*/'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 543

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['AutoML'](#), at the line number 543

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace ['AutoML'](#) to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 543

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['VisualEngine'](#), at the line number 549

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace ['VisualEngine'](#) to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 550

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 550

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 557

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 557

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 561

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 561

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace ['/*'](#) to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['PCA/t-'](#), at the line number 562

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace 'PCA/t-' to 'Proper Hyphens Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 565

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '/*' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['*/'](#), at the line number 565

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '*/' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['/*'](#), at the line number 570

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '/*' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['*/'](#), at the line number 570

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '*/' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['BioMLStudio'](#), at the line number 574

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'BioMLStudio' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: ['UniProt'](#), at the line number 586

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'UniProt' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: ['/'](#), at the line number 599

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '/' to 'Proper Slash Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: ['BioMLStudio'](#), at the line number 606

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'BioMLStudio' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: ['BioMLStudio'](#), at the line number 619

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace 'BioMLStudio' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 622

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[BioMLStudio](#)' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 631

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[BioMLStudio](#)' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 641

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[BioMLStudio](#)' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 644

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[BioMLStudio](#)' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 655

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[BioMLStudio](#)' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 668

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[BioMLStudio](#)' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 671

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[BioMLStudio](#)' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[AutoML](#)', at the line number 674

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[AutoML](#)' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[BioMLStudio](#)', at the line number 680

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[BioMLStudio](#)' to Proper word.

Example: [view](#)

Part of the sentence to be reviewed: '[You?](#)', at the line number 732

Category: **Punctuation**

Suggestion: Based on the context of the sentence, we recommend you to replace '[You?](#)' to 'Proper Question Mark.'.

Example: [view](#)

Part of the sentence to be reviewed: '[AutoML](#)', at the line number 743

Category: **Orthographic Error**

Based on the context of the sentence, we recommend you to replace '[AutoML](#)' to Proper word.

Example: [view](#)

Category Description:

What is Orthographic Error?

Orthographic errors occur when fail to understand the relationship between graphemes and phonemes.

For example, the authors will write skool instead of school or kik instead of kick. [\[top\]](#)

What is Short Form Expression?

It is just a short version of a longer word or a phrase. Generally, Short Form Expression or Abbreviations are not acceptable in academic writing and should be avoided.

For example, Avoid e.g. and i.e., instead use 'for example' and 'for instance'. [\[top\]](#)

What is Punctuation Error?

Punctuational error often centre around misplacing punctuation in a sentence, incorrectly punctuating plural words, overusing and confusing the uses of different punctuation marks.

For example, Incorrect: I bought some olives, which we didn't eat when I went shopping last week.

Correct: 'I bought some olives, which we didn't eat, when I went shopping last week.' [\[top\]](#)

What is Compound Words?

Compound words occur when two or more words combine to form one individual word or a phrase that acts as one individual word. Compound words often produce writing mistakes because it's easy to forget if they're spelled as one word or two words.

For example, Incorrect: We ate icecream after the foot ball game at the local high school.

Correct: We ate ice cream after the football game at the local high school. [\[top\]](#)
